SUMMARY

React.js Developer with 4.5+ years of experience building responsive, API-driven web applications for enterprise and client projects. Skilled in React.js, Redux Toolkit, React Router, and REST API integration, with hands-on experience in JWT-based authentication, reusable component design, and production deployments on Vercel. Currently strengthening TypeScript, AWS, Jest and SQL.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, React Hooks, React Router, Redux Toolkit, Vite, Tailwind CSS, Bootstrap, Styled Components, Responsive Design

Backend & APIs: REST APIs, Axios, Node.js, Express.js, MongoDB, Mongoose, Postman

Authentication & Integrations: JWT, OAuth 2.0, Firebase Authentication, Firestore, EmailJS, Cloudinary

Tools & Deployment: Git, GitHub, Vercel (CI/CD), Environment Configuration, Agile/Scrum

Currently Learning: TypeScript, Next.js, AWS, Jest and SQL

PROFESSIONAL EXPERIENCE

BuildMeProduct | React.js Developer June 2024 – Present

- Built React.js applications that fetch and display 1,000+ records from REST APIs, implementing pagination, responsive layouts, and reusable card components across 20+ pages/modules.
- Implemented JWT-based authentication and authorization, attaching authorization tokens to API requests and handling authenticated server responses on the client.
- Designed and developed reusable UI components and dynamic card-based interfaces with loading states, improving consistency and maintainability across the application.
- Implemented API error handling and fallback states using try/catch, providing appropriate user feedback and improving application resilience during failed API requests.
- Implemented client-side routing with React Router and built dynamic forms using controlled components, integrating form submissions with Firebase/backend services.
- Performed frontend performance optimization by identifying unnecessary re-renders, optimizing component rendering, improving API/data handling, and refining UI implementation for better application responsiveness.
- Used AI-assisted development (prompt engineering) to speed up implementation and debugging, reviewing and validating all generated code against project requirements and architecture.
- Managed delivery with Git/GitHub feature branches, pull requests, and code reviews, and released to production with environment configuration.

Capgemini | Frontend Developer Dec 2021 – May 2024

- Developed and maintained frontend applications for business use with React 16, JavaScript, HTML5, React Hooks, and bootstrap.
- Integrated REST APIs using Axios to fetch, process, and display dynamic business data, handling loading and error states in the UI.
- Tested and debugged API integrations with Postman to verify responses before connecting them to the UI.
- Built reusable React components shared across screens, reducing duplicate code and keeping the UI consistent.
- Investigated and fixed UI bugs, such as layout, responsiveness, and state-related issues, raised during testing and QA, improving application stability.
- Worked in an Agile/Scrum team (sprint planning, daily stand-ups, code reviews), using Git/GitHub for branching and pull requests.

FREELANCE CLIENT PROJECTS

Dharmapeetam Website |https://dharmapeetam.com/

Technologies: *React.js, Vite, Tailwind CSS, EmailJS, Google Sheets API*

- Integrated EmailJS so visitors can send inquiries through a contact form without a backend.
- Connected the Google Sheets API to fetch and update course card data, letting non-technical admins manage course content.
- Implemented reusable and maintainable UI components using Tailwind CSS for component-level styling and consistent design.

.

Clinical Research Website | https://www.acrind.com/

Technologies: *React.js, Vite, Styled Components, React Router, Bootstrap, Firebase Authentication, Firestore, EmailJS, Cloudinary*

- Built Admin Dashboard, dynamic course management, certificate management & online certificate verification with secure authentication and Firestore-backed data.
- Integrated EmailJS & Cloudinary for contact submissions and media management; implemented custom 404, SPA routing, responsive/mobile-first UX and production-ready architecture.
- Git/GitHub — feature branches, commits, Pull Requests & code-review workflow; Vercel CI/CD, production deployment, environment variables and automated builds.
- Domain & DevOps — GoDaddy domain acquisition, DNS configuration, HTTPS/SSL and complete custom-domain production deployment

CERTIFICATIONS

- Meta Front-End Developer
